

Manual Test Plan - Jarifa Tasnim Portfolio

1. Document Information

Project: Personal Portfolio

Application Type: React Web Portfolio

Deployment: Vercel

Test Type:

- Manual Functional,
- UI,
- Usability,
- Navigation,
- Responsive
- Basic Compatibility Testing

Document Status: Executed

Prepared By: Jarifa Tasnim

2. Objective

The objective of this test plan is to verify that the portfolio works as expected from a visitor's perspective. Testing focuses on navigation, section accessibility, section's content, contact functionality, CV download, responsive behavior, links and common UI interactions.

3. Scope

- **In Scope**
 - Landing section
 - Navigation and section routing
 - Skills section
 - Projects section
 - Certifications section
 - Contact section
 - CV download link
 - Internal and external links
 - Buttons and interactive elements
 - Basic form validation
 - Responsive layout on desktop, tablet and mobile sizes
 - Basic browser compatibility

- Visual consistency and usability
- Error handling for invalid form input

- **Out of Scope**

- Backend code that is not exposed through the portfolio
- Security penetration testing
- Load testing
- Source code unit testing
- Automated testing (will be handled in the next QA phase)

4. Test Approach

Testing will follow this sequence:

1. Review the visible features.
2. Identify test scenarios.
3. Create detailed test cases.
4. Execute the test cases manually.
5. Record actual results and execution status.
6. Log reproducible defects.
7. Retest fixed defects.
8. Perform regression testing.
9. Prepare the final QA summary.

5. Test Types

- **Functional Testing**

Verify that navigation, buttons, links, forms and downloads perform as expected.

- **UI Testing**

Verify layout, text visibility, alignment, spacing, button states and consistency.

- **Usability Testing**

Verify that a first time visitor can understand and use the portfolio without confusion.

- **Responsive Testing**

Verify that content remains usable at desktop, tablet and mobile viewport sizes.

- **Compatibility Testing**

Verify the main user flows in supported modern browsers such as Chrome, Edge and Firefox.

- **Negative Testing**

Verify behavior with invalid, empty or unexpected input in the interactive sections.

6. Test Environment

- OS: Windows
- Browser 1: Google Chrome
- Browser 2: Microsoft Edge
- Browser 3: Mozilla Firefox
- Viewports:
 - Desktop: 1920×1080
 - Laptop: 1366×768
 - Tablet: 768×1024
 - Mobile: 390×844

7. Entry Criteria

Testing will start when:

- The portfolio deployment is accessible.
- Main navigation is available.
- The major portfolio sections are implemented.
- The tester has access to the required test data, contact form inputs.

8. Exit Criteria

Testing can be considered complete when:

- All planned test cases have been executed.
- Failed cases have been investigated.
- Reproducible defects have been documented.
- Fixed defects have been retested.

- Regression testing has been completed.
- The final QA summary has been prepared.

9. Severity and Priority

- Severity
 - Critical: Major feature unavailable or application unusable
 - High: Important functionality fails
 - Medium: Functionality works incorrectly with a noticeable impact
 - Low: Minor UI or content issue
- Priority
 - P1: Must fix
 - P2: Should fix
 - P3: Can be fixed later

10. Deliverables

- Test Plan
- Test Scenarios
- Test Cases
- Test Execution Report
- Bug Reports
- Retest/Regression Results
- Final QA Summary Report

11. Assumptions

The portfolio is treated as a visitor facing web application. Expected behavior should be based on the current implementation and intended user experience. Any behavior that cannot be verified from the live site should be marked as "Not Testable" or clarified before execution rather than assumed.
